- Students' feedback:
 - ❖ "I felt like using Google Docs and editing other peer's work was very helpful. It was sort of a breath of fresh air to have a fellow student question my work. I also found it easier to complete assignments through Google docs because it reduced the amount of chaos that comes with turning in assignments online."
 - ❖ "I appreciated the peer review process the most because peer review sessions are typically very difficult to take seriously in terms of listening to fellow classmates on what could be improved in your work. I really appreciated having more than one person look and review my work as well as the professors because most of the time multiple people would point out the same thing in my work that they felt could be stronger or removed entirely which reinforced the need to correct it."

- ❖ From a senior "learning how to use google docs was beneficial."
- ❖ "... trying to find the documents of homework in the google docs was a little difficult, however

sending invitations to my (Gmail) to edit documents made that process easier"

- ❖ "Not many questions needed in this class because almost all the information was provided on the WordPress."
- ❖ "I found the homework structure to be very organized and easy to follow."
